

Liner Bags Quality Control

AFRITRADE

Liner Bags for Cup lump shipping Production and Quality Control

Keeping shipping environment clean

- Liner Bags to be safe and water resistant
- Competitive in price
- Quick Setup in 10-12 minutes
- Recycling concept
- Direct Deliveries to countries in West Africa

Liner Bags Quality Control executed for Countries of West Africa

Management in Côte d'Ivoire in Guinea, Liberia and Ghana formed teams to define requirements for the project.

The involved teams discussed final version of high tech Liner bags for cup lums and tested the products in three Pilots since 2020.

Production is running!

Liner Bags Production and Quality Control

We will present the production of the liner bags step by step in order to achieve this first result after opening the transport bag.

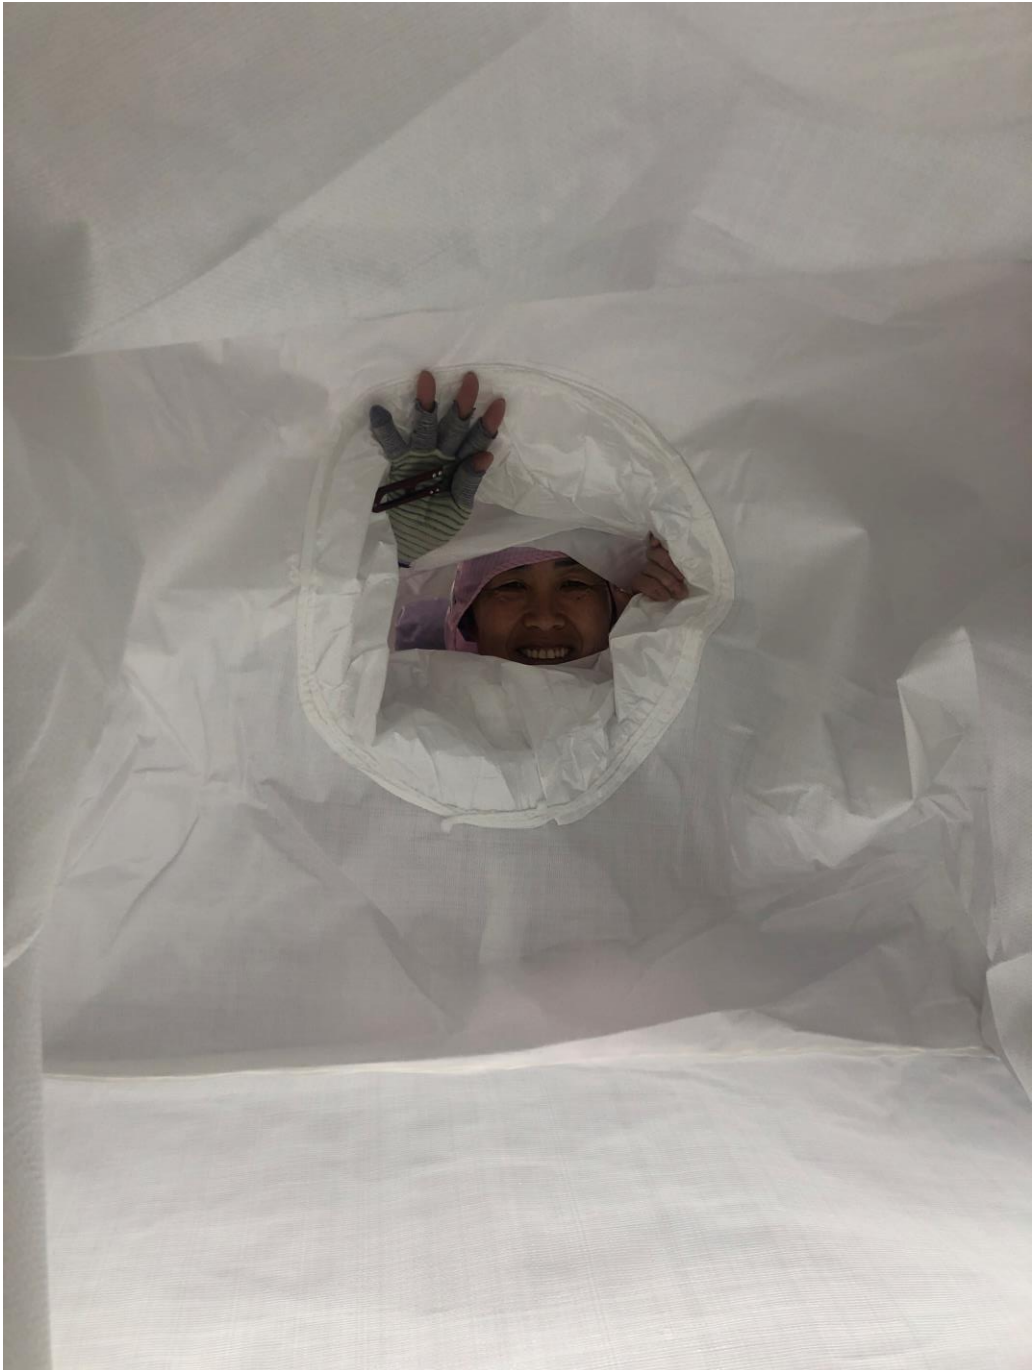

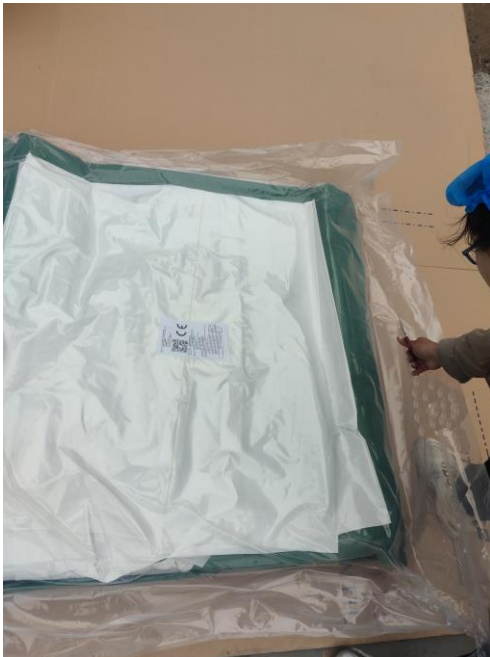

Hello! Welcome! 😊

27 kg + 1kg = 28kg

CE

This product is harmless to health when used as intended.

The bag may not be used as a tent or shelter. There is a risk of suffocation because the bag is waterproof and airtight.

The stay in the bag may only last as long as this bag has not yet been closed. Never enter the bag when it has been fumigated.

Fumigation may only be carried out by a trained specialist with respiratory protection. Fumigation must be indicated on the container by warning signs. A fumigated bag must not be left unattended and must always be securely closed.

The films from which the bag was made are to be recycled in order to support the recycling cycle.

what you see!**

Competitor Old Liner Bags in the market

- Competitors bags are very bulky
- The volume is much bigger
- Hardly possible for one person to lift the bag
- As wrapping is sewn and no single sleeve bag available, risk of cutting
- Material consumption is much higher
- No concept to use only one material to make recycling more easy
- 30 Minutes to set up bag and subsequently late packaging start

- Concept and testing of initial production was a team work!
